ARE YOU READY FOR THE MICROSOFT® WINDOWS® 10 ANNIVERSARY UPDATE?

Keep your customers protected. Help them upgrade their Kaspersky Lab products now.

On 2 August 2016, Microsoft will make available its latest and so-far biggest update for Microsoft Windows 10 – the Windows 10 Anniversary Update, codenamed "Redstone 1"*. According to Microsoft, this update will mean some big changes, introducing a number of new features and enhancements.

But it also changes how Microsoft Windows 10 works with software already installed or which the user may install in the future. After your customers upgrade to Windows 10, their current Kaspersky Lab security product may offer limited functionality. Older products may not work at all.

TELL YOUR CUSTOMERS TO UPGRADE NOW – FOR FREE

The incompatibility of some functions in older Kaspersky Lab security products with the Windows update does not need to be a problem. Simply tell customers with older software to update to the latest version of their product.

THERE ARE TWO POSSIBLE SCENARIOS:

UPGRADE TO THE 2017 PRODUCT:

In some markets, the 2017 products will be available by 2 August 2016. These products are compatible with Windows 10 Anniversary Update.

UPGRADE TO THE 2016 PRODUCT:

Where the 2017 product isn't yet available, users need to download and install the 2016 products.

The latest version of any Kaspersky Lab software can be found on the Product Updates page of your local Kaspersky Lab website:

<http://www.kaspersky.com/product-updates>

* See this website for more information: <http://www.winbeta.org/tags/redstone>

WHICH PRODUCTS WILL SUPPORT WINDOWS 10?

Whether a customer's product supports Windows 10, and how comprehensively, depends on which version of the software they are using. This table tells you what you need to know.

OTHER REASONS TO UPGRADE

Customers with a valid licence can upgrade to the latest version of their Kaspersky Labs security product for free. See the table at the bottom of the page for some of the new features in the 2017 products.

KASPERSKY LAB SECURITY PRODUCTS AND MICROSOFT WINDOWS 10
